DETAILED ACTION

Drawings

The drawings are objected to because the bands from the electrophoretic photo in Fig. 1 are not all visible, and in Fig. 3 the two right boxes have writing partially obscured because it is the same color as the portion of the photo on which it appears. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The specification is replete with grammatical and idiomatic errors too numerous to mention specifically. The specification should be revised carefully. Examples of such errors are: page 3, line 17, "level of a factor VEGF" is confusing; p. 3, line 18, "(AMD)" should follow the full "Age-related macular degeneration"; also "macular" should be --macular-- in that line; p. 4, line 17, "as human lives longer"; p. 12, line 20, "has not affect the".

Appropriate correction is required.

Information Disclosure Statement

The IDS submitted May 1, 2008, has been considered. Reference 1, "DATABASE WPI Week 2003...", was not included in the submission or prior art and could not be considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 200214488 (cited by Applicants in the IDS filed 5/1/08).

WO 200214488 teaches a therapeutic agent which is saxatillin (SEQ ID NO:1) and has the property of (p. 6, lines 18-23) “inhibitory activity against platelet aggregation and angiogenesis which is essential for the metastasis and proliferation of tumor, without any untoward effect on normal endothelial cell proliferation, assuring that the said protein can be developed as an anti-tumor agent.” See also Example 12 for a detailed description of therapeutic use.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kwon et al. (Invest. Ophthal. Vis. Sci, 43:E-Abstract 3716, 2002, reference 2 of IDS filed 5/1/08) as evidenced by Hong et al. (Thromb. Res. 105(1):79-86, 2002, cited by Applicants as reference #2 on IDS filed 6/6/07).

Kwon et al. teach therapeutic results of administering saxatillin for mouse cornea and retina.

While Kwon et al. is silent with respect to the amino acid sequence of saxatillin, the literature supports saxatillin having the sequence of SEQ ID NO:1 as evidenced by, for example, Hong et al., 2002, in Figs 2 and 3.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hong et al. (Thromb. Res. 105(1):79-86, 2002, cited by Applicants as reference #2 on IDS filed 6/6/07) shows a sequence comparison between saxatillin (from *Agkistrodon saxatilis*

emelianov) and salmosin (from *Agkistrodon halys brevicaudus*). These sequences have similar functional properties but not identical amino acid sequences.
